## SUMMARY

Motivated B.Tech student passionate about creating visually appealing user-friendly websites and applications. Pursuing B.Tech studies and additional courses to become a professional web and app developer, with experience in personal, academic, and internship projects.

## WORK EXPERIENCE

**Web Developer Intern**                                                                 Oct 2023 - Nov 2023

As an intern at Exposys Data Labs, I contributed to the development of a responsive online shopping website for dress merchandise, engaging in all phases from conceptualization to execution

## PROJECTS

**KTUGPT**-Next js, Python, Flask, LLM, Embedding Models                         Aug 2023 - May 2024

Built a web application that is designed for answering questions based on the context from the textbook PDFs as a Main project.                                                                    GitHub

**StudyMate**– React, JavaScript, Firebase, Serp API, PDF.js, NPM               Mar 2023 - Jul 2023

Created a web-based study material retrieval system utilizing web scraping, specifically designed for retrieving YouTube videos and text books .                                        GitHub  Website

**Hackathon**– Foss Hack 3.0                                                                            Mar 2023

Attended a hackathon as part of a team of four, where we collaborated to create a website for a simple game.                                                                                       GitHub  Website

**Hospital Management System**– PHP,SQL,JS                                     May 2022 - July 2022

This versatile system empowers healthcare providers, doctors, and patients to efficiently manage their interactions within a hospital environment.                                             GitHub
